

BW8T

Digital Ultrasound Scanner

Leading Digital Technology

- DBF Digital beamformer
- RDF Real-time dynamic filtering
- DFS Dynamic frequency scanning
- RDA Real-time dynamic aperture
- DRF Dynamic receive focusing

Advanced Digital Beam-former Technology

Luxuriant function

Extensive software package

- Obstetric, gynecology, urology, cardiology, etc.
- Follicular examination package applicable to female sterility
- 4B mode for Multi-angle examination
- Adjustable Scanning depth
- Cineloop storage and speed control
- Swift storage for high efficiency

Liver

Kidney

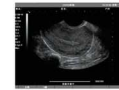

Carotid

Breast Cyst

Early Pregnancy

Uterus

Outstanding pre-setting and user-define features

- Short-keys make operation easier
- User-definable parameters in the clinical package

External device ports

- USB port for image storage and software update
- Video printer and laser printer ports
- Footswitch

Multi-frequency electronic convex array probe (Standard)

Multi-frequency electronic linear array probe (optional)

Multi-frequency electronic micro-convex array probe (optional)

Multi-frequency electronic transvaginal probe (optional)

This instrument is widely applicable to the diagnosis of abdomen, gynecology, obstetric, urology, cardiology, chirurgery, small parts, blood vessel, etc.
